The tool enables you to access Wikipedia's topics and contents without having to use a web browser or connect to the Internet. The advantages of being portable Since this is a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to surf on Wikipedia on the breeze, without having to go through installation steps. Simple interface WikiTaxi boasts a clean and intuitive layout that offers only a few configuration settings to tinker with. Plus, when you run the program for the first time, you can read some useful tips about how to configure the dedicated parameters directly from the main window. Downloading and importing settings It is important to mention that before you can actually make the most out of this tool, you need to download the Wikipedia database file from the Internet. You are offered some links in the primary panel that direct you to different Wikipedia backups from where you can grab the desired XML file. Of course, you can select the preferred language. Once you have downloaded the required XML file, you need to import it into WikiTaxi's database. Depending on the size of the Wikipedia file, the tool may need some time for loading the information into the main panel. At the end of the importing operation, you are ready to explore the Wikipedia content in an offline mode. In order to free up some space on the disk, you can delete the XML file, as the utility doesn't need it anymore for displaying the necessary information. Searching operations WikiTaxi gives you the possibility to display a random page and start browsing from that point, as well as look up for a particular topic by entering the page name or search query. What's more, the program displays only the pages that include all of your search terms, and is able to search for an exact phrase or pages that do not have a specific word in their names. Other notable characteristics worth mentioning enable you to perform search operations inside of the Wikipedia text and customize the HTML text in terms of font, font style, and size. Bottom line All in all, WikiTaxi provides a handy set of parameters for helping you read Wikipedia content in an offline mode, and is

Free Web Proxy Server is a powerful utility that will help you to access the Internet and browse through web pages anonymously without having to rely on third-party web proxies. What is Web Proxy Server? Web Proxy Server is a free software that enables you to surf the Internet using a web proxy server without having to worry about logging in to your ISP's web pages, and to block the so-called web ads. The program enables you to use a free IP address, and this will make it easier for you to navigate through various websites and search engines by hiding your IP address. In addition, you can prevent external sites from checking your information in the log files of your ISP. Why use Web Proxy Server? As you might have guessed, there are many reasons why you need to use Web Proxy Server. Let's take a look at some of them below.

**Avoiding issues** When it comes to Internet usage, Web Proxy Server is the only tool that offers a 100% guarantee of privacy. This is because you can surf the Internet, use a proxy server, and browse the web pages anonymously. However, third-party web proxies such as HotSpot Shield and SpyFu tend to steal your information and log it. Some third-party web proxies may even log the IP address of your browser as well as the IP address of the website that you're browsing. This is one of the reasons why you need to use Web Proxy Server in order to browse the web pages anonymously. Web Proxy Server doesn't log your personal data. Instead, the program merely displays your data through your proxy.

**Caching of information** When it comes to web proxy servers, HotSpot Shield and SpyFu tend to store your information in the cache of your browser. This means that your Internet activity will be stored, and later sent to the ISP's servers. If you use a web proxy such as Free Web Proxy Server, you can browse the Internet and surf through websites without having to wait.

**Browser's standard browser interface** Most proxy servers force you to view a web page through a web proxy server, and you have no choice but to use the interface of the proxy. However, the standard browser interface of Free Web Proxy Server is more intuitive than those of third-party proxies. Therefore, you can simply use it to access web pages, and you don't have to be concerned about any issues.
