Umdatul Ahkam 1 (Buku Saku) Arabic word-for-word transliteration makes it easier to understand. Few handbooks on Islamic juris

Category:Hanafi FiqhQ: Linq to Entities Not getting the data I need I have 3 views. 2 of them are full of form data, the third does a Linq to Entities query. View 1 is all checkboxes, view 2 is all the form data (firstname, lastname, email etc), and view 3 is a linq query that pulls all the data where the parameters selected match what's on the form. I have it so that if the parameter is set, it just pulls the data, if the parameter isn't it just ignores the query, however I need the query to ignore nothing. View 1 contains: @Html.CheckBoxFor(model => model.FirstName, new { @id = "firstname" }) View 2 contains: @Html.EditorFor(m => m.FirstName) View 3 contains: var q = from x in db.CrtDscSetGrp.Where(c => c.IDGroups == id) select c; I've tried a few different things, like: var q = from x in db.CrtDscSetGrp.Where(c => c.IDGroups == id) || c.IDGroups == id select c; But it is either returning nothing or an error. Can anyone tell me how I can get it to ignore if the IDGroups is null? EDIT: I'm trying this at the moment but it's not working: var q = from x in db.CrtDscSetGrp.Where(c => c.IDGroups == id) .Where(c.IDGroups == id) select c; A: Hmmm that's a bit iffy, but could be working; depends on what else is in the final query. The first Where call is returning the "or" filter - any records that don't have that ID groups property are filtered out. The second Where call is returning any records that do have that ID groups property - the final result set is the union of the two filters. Try (also added 55cdc1ed1c
